### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: the prior art, either singly or in combination, fails to anticipate or render obvious, the method including the limitations of feeding at least one oxygen containing vapor precursor to the conductive metal nitride comprising first electrode layer below the 300 °C oxidation temperature under conditions effective to form a first portion oxide material comprising aluminum oxide of a first density of a capacitor dielectric region over the conductive metal nitride comprising first electrode layer, feeding at least one oxygen containing vapor precursor over the first portion at a temperature above the 300 °C oxidation temperature effective to form a second portion oxide material comprising aluminum oxide of a second density, of the capacitor dielectric region over the first portion, the oxide comprising material of the first portion and the oxide material of the second portion being common in chemical composition, the second density greater than the first density in combination with all the other limitations of the independent claim 1.

### ***Election/Restrictions***

Claims 3 and 8 are rejoined because they are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
